

# WSG Recycling Systems Canada

Developers are expected to provide recycling systems in buildings that are as convenient as garbage disposal. Legislation has made “as convenient” recycling mandatory in any new development being planned or built.

## THE WSG RECYCLING SYSTEM

Our systems allow residents to dispose of their garbage and recycling using a single garbage chute. The system directs the materials into one of three separate bins for garbage, commingled recycling or paper. The WSG Recycling System is also adaptable for future municipal program considerations – including organic diversion.

## RESIDENT CONVENIENCE

By installing the system, residents will have access to recycling on each floor that is as convenient as garbage disposal using a single chute.

## BENEFITS FOR THE BUILDER

- Compliance for building permits and municipal garbage + recycling pick-up.
- Saves valuable ground floor area by eliminating the recycling depot room
- Saves saleable area on each floor by allowing the chute room size to be minimized
- The WSG Recycling System can be promoted as a feature in the sales literature
- 3rd party leasing available

## BENEFITS FOR THE RESIDENTS

- Residents will be able to use the chute for garbage and recyclables instead of carrying their materials to a recycling depot located somewhere in the building or even outside
- Eliminates chute room storage on each floor
- Eliminates staff collection from the garbage rooms on each floor
- Reduces monthly maintenance fees by reducing garbage pick-ups

## EASY FOR ARCHITECTS TO SPECIFY & USE

- Custom shop drawings using the latest CAD software
- Specifications in National Master Specifications (NMS)
- Flexible layout configurations
- ULC rated garbage chute doors
- C.S.A. + Electrical Safety Authority approved controls

## AVAILABLE COMPONENTS

- **WSG** automated recycling system
- **Apartment compactor+containers**
- **Garbage chutes**
- **DNA DESTROYER** odour control system
- **BIN BUDDY** motorized bin movers
